Lab - IV	Modeling and Simulation Lab - II	0	0	4	2
Audit - II	Audit Course - II	2	0	0	0
	<b>Total Credits</b>	<b>14</b>	<b>0</b>	<b>10</b>	<b>18</b>

**Audit Course 1 & 2:**

1. English for Research Paper Writing
2. Disaster Management
3. Sanskrit for Technical Knowledge
4. Value Education
5. Constitution of India
6. Pedagogy Studies
7. Stress Management by yoga
8. Personality Development Through Life Enlightenment Skills

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**MODERN CONTROL THEORY (Professional Core -I)**

**Prerequisite: Control Systems**

**Course Objectives:**

1. To explain the concepts of basic and modern control system for the real time analysis and design of control systems.
2. To explain the concepts of state variables analysis.
3. To study and analyze non-linear systems.
4. To analyze the concept of stability for nonlinear systems and their categorization.
5. To apply the comprehensive knowledge of optimal theory for Control Systems.

**Course Outcomes:** Upon completion of this course, students should be able to:

1. Various terms of basic and modern control system for the real time analysis and design of control systems.
2. To perform state variables analysis for any real time system.
3. Apply the concept of optimal control to any system.
4. Able to examine a system for its stability, controllability, and observability.
5. Implement basic principles and techniques in designing linear control systems.
6. Formulate and solve deterministic optimal control problems in terms of performance indices.
7. Apply knowledge of control theory for practical implementations in engineering and network analysis.

**UNIT I:**

**Mathematical Preliminaries and State Variable Analysis:** Fields, Vectors and Vector Spaces – Linear combinations and Bases – Linear Transformations and Matrices – Scalar Product and Norms – Eigen values, Eigen Vectors and a Canonical form representation of Linear systems – The concept of state – State space model of Dynamic systems – Time invariance and Linearity – Non uniqueness of state model – State diagrams for Continuous-Time State models - Existence and Uniqueness of Solutions to Continuous-Time State Equations – Solutions of Linear Time Invariant Continuous-Time State Equations – State transition matrix and it's properties. Complete solution of state space model due to zero input and due to zero state.

**UNIT II:**

**Controllability and Observability:** General concept of controllability – Controllability tests, different state transformations such as diagonalization, Jordon canonical forms and Controllability canonical forms for Continuous-Time Invariant Systems – General concept of Observability – Observability tests for Continuous-Time Invariant Systems – Observability of different State transformation forms.

**UNIT III:**

**State Feedback Controllers and Observers:** State feedback controller design through Pole Assignment, using Ackkermans formula– State observers: Full order and Reduced order observers.

**UNIT IV:**

**Non-Linear Systems:** Introduction – Non Linear Systems - Types of Non-Linearities – Saturation – Dead-Zone - Backlash – Jump Phenomenon etc; Linearization of nonlinear systems, Singular Points and its types– Describing function–describing function of different types of nonlinear elements, – Stability analysis of Non-Linear systems through describing functions. Introduction to phase-plane analysis, Method of Isoclines for Constructing Trajectories, Stability analysis of nonlinear systems based on phase-plane method.

**UNIT V:**

**Stability Analysis:** Stability in the sense of Lyapunov, Lyapunov's stability, and Lyapunov's instability theorems - Stability Analysis of the Linear continuous time invariant systems by Lyapunov second method – Generation of Lyapunov functions – Variable gradient method – Krasoviski's method.

**TEXT BOOKS:**

1. M. Gopal, Modern Control System Theory by – New Age International - 1984
2. Ogata. K, Modern Control Engineering by– Prentice Hall - 1997
3. N K Sinha, Control Systems– New Age International – 3<sup>rd</sup> edition.

**REFERENCES:**

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**ESTIMATION OF SIGNAL AND SYSTEMS (Professional Core – II)**

**Course Objectives:**

1. To expose students to different system identification concepts.
2. To make the use of random-process models to represent non-deterministic signals and noise
3. To extract the time-domain and frequency-domain structure of the signals and noise from the models

**Course Outcomes:** Upon the completion of this course, the student will be able to

1. Apply the concepts of developing mathematical models for industrial systems,
2. Develop models from first principles and data driven models.

**UNIT I:**

Review of Probability theory and random variable - random process - Linear Regression. ARMAX Model Structure.

**UNIT II:**

Concept of estimation, Recursive least squares (RLS), Consistency of estimation, Weighted LS. Convergence analysis LS. Parametric models - LS estimation, bias - Generalized Least Squares (GLS)

**UNIT III:**

Parameters estimation using Instrumental Variable (IV) method. Persistently exciting input signal - Likelihood functions and Maximum Likelihood Estimation (MLE) - Singular Value Decomposition (SVD).

**UNIT IV:**

Kalman filter, State estimation using Kalman filter, Parameter estimation using Kalman filter.

**UNIT V:**

Extended Kalman Filters (EKF), State and Parameter estimations of nonlinear systems using EKF.

**TEXT BOOKS:**

1. Papoulis and Pillai, Probability, Random Variables and Stochastic Process, McGraw Hill, 2002.
2. Jerry M. Mendel, Lessons in Estimation Theory for Signal Processing, Communications, and Control, Prentice - Hall, 1995.

**REFERENCES:**

2. Michel Verhaegen and Vincent Verdult, Filtering and System Identification A Least Squares Approach, Cambridge Univ. Press, 2007.
3. M.S. Grewal and A. P. Andrews, Kalman Filtering Theory and Practice Using Matlab, John Wiley, 2008.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**INTELLIGENT CONTROL (Professional Elective-I)**

**Course Objectives:**

1. Gaining an understanding of the functional operation of a variety of intelligent control techniques and their bio-foundations
2. the study of control-theoretic foundations
3. learning analytical approaches to study properties

**Course Outcomes:** Upon the completion of this course, the student will be able to

1. Develop Neural Networks, Fuzzy Logic, and Genetic algorithms.
2. Implement soft computing to solve real-world problems mainly pertaining to control system applications

**Unit-I**

Introduction and motivation. Approaches to intelligent control. Architecture for intelligent control. Symbolic reasoning system, rule-based systems, the AI approach. Knowledge representation. Expert systems.

**Unit-II**

Concept of Artificial Neural Networks and its basic mathematical model, McCulloch-Pitts neuron model, simple perceptron, Adaline and Madaline, Feedforward Multilayer Perceptron. Learning and Training the neural network. Data Processing: Scaling, Fourier transformation, principal-component analysis.

**Unit-III**

Networks: Hopfield network, Self-organizing network and Recurrent network. Neural Network based controller Case studies: Identification and control of linear and nonlinear dynamic systems using Matlab-Neural Network toolbox. Stability analysis of Neural-Network interconnection systems.

**Unit-IV**

Genetic Algorithm: Basic concept of Genetic algorithm and detail algorithmic steps, adjustment of free parameters. Solution of typical control problems using genetic algorithm. Concept on some other search techniques like tabu search and ant-colony search techniques for solving optimization problems.

**Unit-V**

Introduction to crisp sets and fuzzy sets, basic fuzzy set operation and approximate reasoning. Introduction to fuzzy logic modeling and control. Fuzzification, inferencing and defuzzification. Fuzzy knowledge and rule bases. Fuzzy modeling and control schemes for nonlinear systems. Fuzzy logic control for nonlinear time-delay system. Implementation of fuzzy logic controller using Matlab fuzzy-logic toolbox. Stability analysis of fuzzy control systems.

**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**SYSTEM DYNAMICS AND CONTROL (Professional Elective - I)**

**Course Objectives:**

1. To learn about dynamic behavior of nonlinear, distributed and other complex systems,
2. To design the various controllers based on Dynamic Models.

**Course Outcomes:** Upon the completion of this course, the student will be able to

1. After the completion of this course the student will be able to get the Knowledge of phase plane, Laplace domain, and frequency domain analysis of nonlinear distributed and multivariable systems for dynamic behavior and stability.
2. Able to design various controllers.
3. Analyze systems for advanced control strategies.

**UNIT- I:**

Concepts of dynamic and static systems, Physical models and system construction, Electrical behavior components, Concept of energetic systems, Electromechanical systems, Hybrid and integrated system examples, Degrees of freedom analysis, Solution of Dynamic Models and the Use of Digital Simulators.

**UNIT- II:**

Development of a Transfer Function, Linearization of Nonlinear Models, Response of Integrating Process Units, Poles and Zeros and their Effect on System response, Time Delays, Approximation of Higher - Order Systems, Interacting and Non-interacting Processes, Transfer function Models for Distributed Systems, Multiple - Input, Multiple - Output (MIMO) Processes.

**UNIT- III:**

Feedback Controllers Stirred - Tank Heater Example, Controllers, and Digital Versions of PID Controllers, Transducers and Transmitters, Final Control Elements, Accuracy in Instrumentation. Block Diagram Representation, Closed - Loop Transfer functions, Closed - Loop Responses of Simple Control Systems, General Stability Criterion, Routh-Stability Criterion for time delay systems, Direct Substitution method, Root Locus Diagrams.

**UNIT- IV:**

Performance Criteria for Closed - Loop Systems, Direct Synthesis Method, Internal Model Control, Design Relations for PID Controllers, Comparison of Controller Design Relations. Guidelines for Common Control Loops, Trail and Error Tuning, Continuous Cycling Method, Process Reaction Curve Method, troubleshooting Control Loops.

**UNIT- V:**

Introduction to feed forward Control, Ratio Control, and Feed forward Controller Design based on Steady - State Models, Controller Design based on Dynamic Models, Tuning Feed forward Controllers, Realization of microcomputer control systems, interfacing with external equipment, computer data acquisition, and control, illustration of a computer implementation: preliminaries, microcomputer realization of a liquid level/flow control system.

**TEXT BOOKS:**

1. Dale E. Seborg, Thomas F. Edgar, Duncan A. Mellichamp, Process Dynamics and Control, John Wiley & Sons, 2<sup>nd</sup> Edition, 2004.
2. System dynamics and control, Eronini Umez-Eronini, Published by PWS pub. Co. 1999

**REFERENCE BOOK:**

1. Brian Roffel, Ben Betlem, Process Dynamics and Control Modeling for Control and Prediction, John Wiley & Sons Ltd., 2007.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**PROCESS MODELING AND SIMULATION (Professional Elective - I)**

**Course Objectives:**

1. To understand the concepts of process model and control
2. to enable to develop model and simulation of process control

**Course Outcomes:** After the completion of this course, the student will be able to

1. Understand the fundamentals and overview of process control, the static and Dynamic analysis of instrumentation system,
2. Apply the concept of Simulation and Modeling,
3. Able to develop Advanced Control Schemes for real time applications
4. Able to Design Multi-loop Controllers and Digital controllers.
5. Analyze Real Time Control strategies.

**UNIT- I:**

**Introduction to Modelling:** Introduction to modeling, a systematic approach to model building, classification of models. Conservation principles, thermodynamic principles of process systems.

**UNIT-II:**

**Steady State and Dynamic Models of Process Systems-I:** Development of steady state and dynamic lumped and distributed parameter models based on first principles. Analysis of ill-conditioned systems.

**UNIT-III:**

**Steady State and Dynamic Models of Process Systems-II:** Development of grey box models. Empirical model building. Statistical model calibration and validation. Population balance models. Examples.

**UNIT-IV:**

**Solution Strategies for Lumped Parameter Models:** Solution strategies for lumped parameter models. Stiff differential equations. Solution methods for initial value and boundary value problems. Euler's method. R-K method, shooting method, finite difference methods. Solving the problems using relevant softwares.

**UNIT-V:**

**Solution Strategies for Distributed Parameter Models:** Solution strategies for distributed parameter models. Solving parabolic, elliptic, and hyperbolic partial differential equations. Finite element and finite volume methods.

**TEXT BOOK:**

1. K. M. Hangos and I. T. Cameron, "Process Modeling and Model Analysis", Academic Press, 2001.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**INSTRUMENTATION AND CONTROL (Professional Elective – II)**

**Course Objectives:**

1. To provide knowledge of Instrumentation systems and their applications.
2. To provide knowledge of advanced control theory and its applications to engineering problems.
3. To have a comprehensive idea about P, PI, PD, PID controllers

**Course Outcomes:** Upon the completion of this course, the student will be able to

1. To understand and analyze instrumentation systems and their applications to various industries.
2. To apply advanced control theory to practical engineering problems.

**Unit-I**

Instrumentation: Introduction to mechanical systems and their structure and function, Performance Characteristics – Static and Dynamic, Fundamentals of signals acquisition, conditioning and processing,

**Unit-II**

Measurement of temperature, pressure, flow, position, velocity, acceleration, force, torque etc.

**Unit-III**

Control: Introduction to control systems, mathematical model of physical systems in transfer function and state space forms, response of dynamic systems, concept of pole & zero of a system,

**Unit-IV**

Realization of transfer functions, stability analysis. Introduction of discrete time system. Controllers: P, PI, PD, PID, Feed forward etc., tuning of controller parameters, disturbance rejection, implementation of controller using digital computer.

**Unit-V**

Control components: Actuator (ac & dc servomotors, valve), AC, DC tacho-generators, servo amplifier.

**TEXT BOOKS:**

1. John P Bentley, "Principles of Measurement Systems" 3<sup>rd</sup>. Edition, Pearson
2. Alok Barua, "Fundamentals of Industrial Instrumentation" Wiley India, 2011
3. William Bolton, "Instrumentation and Control Systems", Elsevier, 2015

**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**ADVANCED MICROPROCESSORS (Professional Elective - II)**

**Prerequisite: Microprocessor and its applications**

**Course Objectives:**

1. To understand architectural features of 8086 microprocessors
2. To understand various peripheral devices and different components interfacing with it along with 8051 Microcontroller
3. To understand architectural features of advanced processors and microcontrollers
4. To learn necessary programming skills to develop applications.

**Course Outcomes:** After completion of this course the student

1. Develops knowledge and skills for programming of 8086 microprocessors and interfacing techniques for various peripheral devices.
2. Attains programming skills of 8051 microcontrollers and its applications through various case studies.

**UNIT-I:**

**Intel 8086/8088:** Architecture, its register organization, pin diagram, minimum and maximum mode system and timings, machine language instruction formats, addressing modes, instruction set, assembler directives and operators.

**UNIT-II:**

**ALP AND Special Architecture Features:** ALP, Programming with an assembler, stack structure, interrupts, and service subroutines and interrupt programming and Macros.

**UNIT-III:**

**Multiprocessor Systems:** Inter connection topologies, numeric processor 8087, I/O processor 8089. Bus arbitration and control design of PC based multiprocessor systems, virtual memory, paging, segmentation.

**UNIT-IV:**

**Advanced Processors:** Architectural features of 80836,486 and Pentium processors their memory management, introduction to Pentium pro processors their features, RISC Vs CISC processors, RISC properties, evaluation, architectural features of DEC alpha AXP, power PC family, and sun SPARC family systems.

**UNIT-V:**

**Microcontroller:** Microcontrollers – 8051 architectures, hardware, interrupts, addressing modes, instruction set –programming-applications.

**TEXT BOOKS:**

**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**DSP PROCESSOR ARCHITECTURE AND APPLICATIONS (Professional Elective - II)**

**Prerequisite: Microprocessor and its applications**

**Course Objectives:**

1. To introduce various techniques of digital signal processing that are fundamental to various industrial applications.
2. To learn the basis of DSP systems, its theory and practical implementation of different kind of algorithms
3. To know third generation DSP architectures and interfacing of memory and I/O peripherals to the DSP processors.

**Course Outcomes:** After completion of this course the student

1. Gets an in-depth knowledge of DSP processors their architectures.
2. Knows programming language techniques, integration of DSP programmable devices with memories and I/O peripherals.

**UNIT-I:**

**Introduction to Digital Signal Processing:** Introduction, A Digital signal-processing system, The sampling process, Discrete time sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear time-invariant systems, Digital filters, Decimation and interpolation, Analysis and Design tool for DSP Systems MATLAB, DSP using ATLAB. **Computational Accuracy in DSP Implementations:** Number formats for signals and coefficients in DSP systems, Dynamic Range and Precision, Sources of error in DSP implementations, A/D Conversion errors, DSP Computational errors, D/A Conversion Errors, Compensating filter.

**UNIT-II:**

**Architectures for Programmable DSP Devices:** Basic Architectural features, DSP computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Speed issues Features for External interfacing. **EXECUTION CONTROL AND PIPELINING:** Hardware looping, Interrupts, Stacks, Relative Branch Support, Pipelining and performance, Pipeline Depth, Interlocking, Branching effects, interrupt effects, pipeline Programming models.

**UNIT-III:**

**Programmable Digital Signal Processors:** Commercial Digital signal-processing Devices, Data Addressing modes of TMS320C54XX DSPs, Data Addressing modes of TMS320C54XX Processors, Memory space of TMS320C54XX Processors, Program Control, TMS320C54XX instructions and Programming, On-Chip peripherals, Interrupts of TMS320C54XX processors, Pipeline Operation of TMS320C54XX Processors.

**UNIT-IV:**

**Implementation of Basic DSP Algorithms:** The Q-notation, FIR Filters, IIR Filters, interpolation Filters, Decimation filters, PID Controller, Adaptive Filters, 2-D Signal Processing. Implementation of FFT Algorithms: An FFT Algorithm for DFT Computation, A Butterfly Computation, Overflow and scaling, Bit reversed index generation, An 8-point FFT implementation on the TMS320C54XX, Computation of signal spectrum.

**UNIT-V:**

**Interfacing Memory and I/O Peripherals to Programmable DSP Devices:** Memory space organization, External bus interfacing signals, Memory interface, parallel I/O interface, Programmed I/O, Direct Memory access (DMA). A Multichannel buffered serial port (McBSP), McBSP Programming, a CODEC interface circuit, CODEC programming, A CODEC-DSP interface example.

**TEXT BOOKS:**

3. John G. Proakis, Digital signal processing principles – algorithms and applications -PHI-3<sup>rd</sup> edition 2002.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engineering. / Control System.)**

**RESEARCH METHODOLOGY AND IPR**

**Prerequisite:** None

**Course Objectives:**

- To understand the research problem
- To know the literature studies, plagiarism and ethics
- To get the knowledge about technical writing
- To analyze the nature of intellectual property rights and new developments
- To know the patent rights

**Course Outcomes:** At the end of this course, students will be able to

- Understand research problem formulation.
- Analyze research related information
- Follow research ethics
- Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
- Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
- Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

**UNIT-I:**

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

**UNIT-II:**

Effective literature studies approaches, analysis, Plagiarism, Research ethics

**UNIT-III:**

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

**UNIT-IV:**

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

**UNIT-V:**

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engg. / Control Sys.)**

**CONTROL SYSTEM ENGINEERING LAB-I (Lab – I)**

**Course Objectives:**

1. To acquire knowledge on control aspects of an electrical system.
2. To become familiar with the use of simulation tools for the purpose of modeling, analysis and design of systems

**Course Outcomes:** Student will be able to

1. Represent various discrete time systems
2. Analyze the given system by Transfer function and state space approach using suitable software.
3. Design various controllers and compensators to improve system performance and test them in the laboratory as well as using suitable software.
4. To model a given system and its stability Analysis

**List of Experiments:**

1. Development of schematic Model of a dynamical system (Motor/Generator/ Power System etc)
2. Obtain the dynamic response of a continuous system and comment on the effect of parameter variations.
3. Time-Domain Analysis, Error-Analysis, Stability Analysis in Continuous and Discrete domains.
4. Stability Analysis (Bode, Root Locus, Nyquist) Of Linear Time Invariant System in discrete domain
5. Evaluation Of The Effect Of Additional Poles And Zeroes On Time Response Of Second Order System and its stability
6. Design of Digital controllers (P, PI, PID Controllers)
7. Design of Digital Compensators.
8. Design of State Feedback Controllers and Observers
9. Conversion of State Space Model into Classical Transfer Function and Vice Versa.
10. Simulation Of A Closed Loop System(Plant And Compensator) for discrete systems
11. Obtain the phase portraits for non linear system represented by  $\dot{x} = f(x)$  and comment on the aspects of stability for various initial conditions on phase plane.
12. Obtain the describing function for a given nonlinearity over the different sets of range amplitudes for a fixed frequency.
13. Obtain the limit cycle time response and phase plot for stable and unstable vanderpol's equation
14. Estimation of parameters Using Recursive Least Squares Estimator.
15. For a given discrete plant representation in state space. Design a Kalman filter and time varying (extended) kalman filter to estimate the output  $y$  based on the noisy measurements:
16. Based on the distribution of means from repeated random samples of an exponential distribution, with specified Population parameter, Sample size, number of samples.
17. Visualize the distribution of sample means together with the fitted normal distribution

**Note:** The above problems are to be illustrated by considering a suitable system, and by using suitable software or hardware.

**Note:** Minimum of Ten experiments out of which six experiments related to core courses are to be conducted.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech – I Year – I Sem. (Control Engg. / Control Sys.)**

**MODELING AND SIMULATION LAB – I (Lab – II)**

**WRITING PROGRAMS AND DEMONSTRATION**

1. Declination of earth, hour angle, day length, local apparent time
2. Monthly average, hourly global and diffuse radiation on a horizontal surface and tilted surfaces.
3. Power generation from a wind turbine, Variation of wind velocity and power with altitude
4. Solution of ordinary differential equations-4<sup>th</sup> order R K Method
5. Solution of one-dimensional steady state heat conduction equation
6. Solution of two-dimensional steady state PDE
7. Solution of one-dimensional transient PDE

**FINITE ELEMENT ANALYSIS**

8. Two-dimensional heat conduction
9. One dimensional transient heat conduction
10. Transient analysis of a casting process

**CFD ANALYSIS**

11. Flow through a pipe bend
12. Flow through a nozzle

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**  
**M. Tech. (Control Engineering. / Control System)**

**ENGLISH FOR RESEARCH PAPER WRITING (Audit Course - I & II)**

**Prerequisite:** None

**Course objectives:** Students will be able to:

- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section
- Understand the skills needed when writing a Title Ensure the good quality of paper at very first-time submission

**UNIT-I:**

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

**UNIT-II:**

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction

**UNIT-III:**

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

**UNIT-IV:**

key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature,

**UNIT-V:**

skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions. useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

**DISASTER MANAGEMENT (Audit Course - I & II)**

**Prerequisite:** None

**Course Objectives:** Students will be able to

- learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- critically understand the strengths and weaknesses of disaster management approaches,
- planning and programming in different countries, particularly their home country or the countries they work in

**UNIT-I:**

**Introduction:**

Disaster: Definition, Factors and Significance; Difference Between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

**Disaster Prone Areas in India:**

Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post-Disaster Diseases and Epidemics

**UNIT-II:**

**Repercussions of Disasters and Hazards:**

Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.

**UNIT-III:**

**Disaster Preparedness and Management:**

Preparedness: Monitoring of Phenomena Triggering A Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness.

**UNIT-IV:**

**Risk Assessment Disaster Risk:**

Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.

**UNIT-V:**

**Disaster Mitigation:**

Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.

**TEXT BOOKS/ REFERENCES:**

**SANSKRIT FOR TECHNICAL KNOWLEDGE (Audit Course - I & II)**

**Prerequisite:** None

**Course Objectives:**

- To get a working knowledge in illustrious Sanskrit, the scientific language in the world
- Learning of Sanskrit to improve brain functioning
- Learning of Sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power
- The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature

**Course Outcomes:** Students will be able to

- Understanding basic Sanskrit language
- Ancient Sanskrit literature about science & technology can be understood
- Being a logical language will help to develop logic in students

**UNIT-I:**

Alphabets in Sanskrit,

**UNIT-II:**

Past/Present/Future Tense, Simple Sentences

**UNIT-III:**

Order, Introduction of roots,

**UNIT-IV:**

Technical information about Sanskrit Literature

**UNIT-V:**

Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics

**TEXT BOOKS/ REFERENCES:**

1. "Abhyaspustakam" – Dr. Vishwas, Samskrita-Bharti Publication, New Delhi
2. "Teach Yourself Sanskrit" Prathama Deeksha-Vempati Kutumbshastri, Rashtriya Sanskrit Sansthanam, New Delhi Publication
