Information about the Master's specialisations:

A) Telecommunications Systems:

Understand and predict future challenges in communications system. Deepen your knowledge and create, adapt and develop future communications networks.

A complete view of future communication networks

The programme gives you the possibility to immerse into the challenges, problems and possibilities future systems of computer communication will bring. The courses deal with issues concerning computer networks, the internet, mobile systems, cloud communications, software defined networks (SDN), user-perceived service quality (QoE), network-based services and research methodology.

Close to research means close to knowledge and insight

The education consists of lectures, seminars and both theoretical and practical studies close to research and in contact with researchers – giving you a deep insight and understanding of relevant and updated knowledge within the field. To conclude your education a thesis is written based on relevant research, scientific articles, and possibly self-made studies.

B) Computer Science:

The Master's programme in computer science is a broad education with the opportunity to study several courses in the computer science field. The programme requires significant knowledge in programming. If you are interested in a specific area, you have the opportunity to profile and deepen your knowledge in this field through elective courses. The programme has three main directions: IT security, Intelligent Systems, and Distributed and Parallel Systems.

C) Software Engineering:

Analyze, adapt and apply. Meet future needs with a wide capacity to understand software engineering – from start to finish, and every step in between.

Create software to meet future challenges

The Master's programme in Software Engineering meets the complex challenges facing the software developers of the future. You acquire a wide understanding and base of knowledge through education and training in advanced concepts within software engineering, covering the entire development process. You learn how to construct and test software products to meet the challenges of tomorrow, with high demands on efficiency and quality. You also learn how to reflect upon and improve modern development processes.

From start to finish – each process, step and action

The education provides you with the skills and knowledge required to engineer software systems from the initial planning and scoping of projects, to the process of development, testing and delivery of the software system itself. The courses cover both engineering and working methodologies and you will study subjects such as project planning, software quality, and research methodology.
