

## **Prashant kurapati:**

After many years working in industry I was trying to break out of the traditional analyst role into the data science world. After reviewing the course structure of many Universities/Colleges, I found JNTUH\_SCDE\_Data Science with Python Programming course interesting and also challenging. The course content was excellent and they have introduced the topics to help us stay relevant with the current Data Science industry trends. The best thing about this course is that the curriculum here covers topics right from the very basics to advanced NLP, but the quality of the lecturers, was what set it apart from other programmes. The assignments or if I can say many mini projects that we were asked to complete, are for sure going to prepare us for what's required out there for those who are interested in data science field. Whether you are looking to alter your career path, or gain new knowledge in AI and ML I would have no hesitation to strongly recommend this course for prospective students. Kudos to SCDE team to design the programme so well .
